CONSIDERATIONS

Seasonal Use: Clear tops can create a greenhouse effect, requiring AC, side panels, and/or shade in the summer season and heating in cooler weather.

Cold Weather: Clear panels may crack below 36°F. Optional heating is available to reduce risk.

Weather Monitoring: Built to withstand tough conditions, proactive planning is essential for extreme weather events.

Surface Requirements:

- Flat, open space required for footprint, height clearance, install access, and ballasting.
- Uneven terrain? Elevated and laser-leveled floors are available.
- Anchoring options based on surface: stakes recommended; ballast weights optional.
- Obstacles such as trees, pools, planters, etc. can be assessed for custom installations.
